

Aylin Baki (아일린 바키)

Backend & AI Application Engineer

Email: aylinbaki@hotmail.com | Phone: +90 536 069 81 01 | Location: Istanbul, Turkey | GitHub: github.com/Aylinbaki

Notion Portfolio: notion/AylinBaki | LinkedIn: linkedin/AylinBaki

Korean: Upper-Intermediate (TOPIK Level 4) | English: Professional

Profile/ 핵심 역량

- Backend Development & API Architecture:** Experienced in building RESTful APIs using FastAPI, implementing data validation, and structuring scalable backend systems
- DevOps & Quality Assurance:** Skilled in Docker containerization, testing network communications on Linux-based Virtual Machines (VMs), unit test automation with Pytest, and performance testing using JMeter
- AI & Modern Framework Integration:** Hands-on experience working with Semantic Search, Model Context Protocol (MCP), and integrating cloud AI services (Google Cloud TTS / Maps API)
- Cross-Platform Mobile & Cloud Databases:** Proficient in mobile development using Flutter/Dart and integrating real-time database architectures via Firebase (Auth & Firestore)

Tech Stack (기술 스택)

- Languages:** Python, Java, Dart, Kotlin, SQL, HTML/CSS, TypeScript
- Backend & DevOps:** FastAPI, Docker, Linux (VM), Pytest, JMeter, Postman, REST APIs
- AI & Cloud Services:** Semantic Search, MCP (Model Context Protocol), Firebase (Auth/Firestore), Google Cloud TTS, Google Maps API
- Frontend & Mobile:** Flutter
- Tools & Collaboration:** Git, Visual Paradigm, Agile Workflows

Work Experience (경력 사항)

Finnet Elektronik Yayıncılık | Software Engineer Intern

Period: 2025.08 – 2025.09

Tech Stack: Python, FastAPI, Docker, Linux VM, Pytest, JMeter, Postman

- Developed robust RESTful APIs with FastAPI and authored comprehensive API test scenarios using Postman
- Implemented automated unit test suites with Pytest and conducted performance/stress testing via JMeter
- Deployed application components on Linux-based VMs and Docker environments to analyze containerized network communication and data validation

MGA Yazılım Bilgi Dağıtım ve Danışmanlık | Software Engineer Intern

Period: 2025.07 – 2025.08

Tech Stack: Python, FastAPI, Docker, Semantic Search, MCP

- Contributed to projects incorporating modern AI integration standards, specifically Model Context Protocol (MCP) and Semantic Search architectures
- Developed backend components using FastAPI and wrote automated Python scripts for data processing

Key Projects (주요 프로젝트)

VOYIXI – AI-Powered Personalized Travel Planning App

Role: Co-Developer (Graduation Project) | **Period:** 2026

Tech Stack: Flutter, Dart, Firebase (Auth/Firestore), Google Maps API, Google Cloud TTS

- Architected an Android mobile application (Flutter/Dart) that generates customized travel itineraries using AI-driven route optimization to reduce manual planning
- Integrated Google Maps API and crowd-density signals for real-time route adaptation, incorporating landmark voice narration via Google Cloud TTS
- Configured Firebase SDK for secure user session management (Authentication) and real-time trip data synchronization (Firestore)

Education (학력)

Işık University | Istanbul, Turkey

B.Sc. in Software Engineering | Period: 2021 – 2026

Certifications & Languages (자격증 및 언어)

- TOPIK (Test of Proficiency in Korean)** – Level 4 Certificate
- Korean Language Course Completion Certificate (Level 2B)** – Sejong Institute (2023)
- Woman in Tech Program Certificate – YGA (Young Guru Academy) (2024)
- Java Developer Training – Arı Bilgi IT Academy (2024)
