SUMMARY

Results driven Software Engineering student with hands on internship experience in backend development, API design, automated testing, and AI integrated applications. Built and deployed production ready systems using FastAPI, Docker, and Firebase. Delivered an AI powered mobile travel app (Android/Flutter) as graduation project. Known for fast onboarding, proactive communication and bridging technical execution with real world impact also willing to learn new technologies all the time.

Multilingual: Turkish (native) · English (professional) · Korean (professional)

EXPERIENCE

Finnet Elektronik Yayıncılık

August 2025 – September 2025

Intern Engineer

- ÷ Developed FastAPI based REST APIs and created manual and automated API test scenarios using Postman.
- ÷ Designed validation tests for FINNET APIs to verify JSON data types, null constraints, value formats, and duplicate records, and documented test requirements for the team.
- ÷ Implemented automated tests using Pytest and explored load and performance testing with Apache JMeter under different user scenarios.
- ÷ Set up Ubuntu virtual machines and Docker environments, configured network communication, and tested inter VM and container connectivity using ping, Netcat, and port forwarding.

MGA Yazılım Bilgi Dağıtım ve Danışmanlık Hizmetleri Ltd. Şti.

July 2025 – August 2025

Intern Engineer

- ÷ Researched Model Context Protocol (MCP), Function Calling, and Semantic Search for LLM based financial chatbot integrations and external data access scenarios.
- ÷ Developed Python based automation and API integration workflows to retrieve, filter, and process financial news data from external services.
- ÷ Built FastAPI endpoints to dynamically serve AI generated Markdown content and integrate it with internal article services.
- ÷ Implemented data validation and duplicate prevention logic to improve reliability of the news processing pipeline.
- ÷ Automated scheduled backend tasks using APScheduler and containerized the application with Docker and Docker Compose for portable deployment.

EDUCATION

Işık University — İstanbul, Turkey

2021 – 2026

B.Sc. Software Engineering

Sınav Anatolian High School — Edirne

2018 – 2020

High School Diploma

Bahçeşehir Anatolian High School — Edirne

2016 – 2018

PROJECTS & ACADEMIC INVOLVEMENT

VOYIXI — AI Powered Personalized Travel Planning & Smart Route Generation

Graduation Project | Co-Developer | 2026

- ÷ Architected an Android mobile app (Flutter/Dart) that generates personalised travel itineraries using AI route optimisation reducing manual trip planning effort for users by automating day by day scheduling.
- ÷ Integrated Google Maps API and crowd density signals to enable real time itinerary adaptation, and added landmark voice narration via Google Cloud TTS, increasing in app engagement.
- ÷ Implemented Firebase Authentication for secure user sessions and Firestore for real time trip data storage and retrieval, integrated directly into the Flutter mobile client via Firebase SDK

TECHNICAL SKILLS

Programming Languages: Python · Java · Dart · HTML/CSS

Frameworks & Tools: FastAPI · Flutter · Docker · Docker Compose · Firebase · Pytest · Postman · JMeter · Visual Paradigm

LANGUAGES

Turkish: Native

English: Professional proficiency

Korean: Upper-Intermediate — TOPIK Level 4 Certificate

German: Beginner

CERTIFICATIONS & TRAINING

- ÷ Supervised Machine Learning: Regression and Classification
- ÷ Neural Networks and Deep Learning
- ÷ TOPIK — Level 4
- ÷ Korean Language — Sejong Institute, Certificate of Course Completion 2B (2023)
- ÷ Java — Ari Bilgi IT Academy (2024)
- ÷ Woman in Tech Program — YGA (2024)
